David Lindarte

Energy & Commodity Market Analyst | Data Scientist | Petroleum Engineer

0434257953 | davidalindarte@hotmail.com |

Work rights: full-time from December 2026 (Temporary Graduate visa, subclass 485) |

PROFESSIONAL SUMMARY

Petroleum engineer with 5 years of upstream oil and gas experience, including Halliburton and Ecopetrol, completing a Master of Science in Predictive Analytics (Finance & Investment) at Curtin University. Builds end-to-end forecasting and machine-learning models in Python, R and SQL, from data pipelines and statistical testing to out-of-sample validation, applied to LNG, gas and oil markets, energy demand and portfolio optimisation.

Combines first-hand knowledge of energy operations with a rigorous quantitative foundation, suited to market analysis, commodity trading support and energy data science roles.

WORK EXPERIENCE

Finance & Data Analytics Professional (Summer Program) Nov 2025 – Jan 2026
ATP Ingeniería SAS | Colombia

- Designed and deployed a Python tool that validates data quality across 100+ budget and cost-control spreadsheets in under 3 minutes, replacing a manual review process.
- Built Python scripts to extract, clean and reconcile ERP data, cross-checking accounts payable against payroll records and reporting discrepancies to the finance team.
- Maintained data accuracy across multiple fast-changing financial data streams under operational deadlines.

Logging While Drilling (LWD) Engineer — Log Analyst Feb 2022 – Feb 2025
Halliburton | Colombia

- Acquired and analysed real-time downhole sensor data for reservoir characterisation and evaluation of hydrocarbon potential, turning measurements into drilling and commercial decisions.
- Worked with operator companies on well design, BHA configuration and data-acquisition strategy, weighing technical and financial constraints.
- Validated directional work and collision-avoidance plans and supervised LWD operations on site.
- Owned end-to-end well data assurance and delivery, including secure remote transfer of classified client data; primary technical contact for clients on tool performance and recommendations.
- Office engineer: resolved customer enquiries, built data-acquisition plans and selected tools and pulse frequency to meet customer standards.

Company Man Assistant (Drilling Supervision) Nov 2021 – Feb 2022
Ecopetrol / Consultec | Rubiales Field, Colombia

- Coordinated simultaneous rig-site operations across multiple service contractors.
- Verified third-party services and invoices against the drilling program and reviewed contractor agreements.
- Supervised rig-floor activities and prepared the technical and regulatory documentation required by government authorities.

Cathodic Protection Engineer Oct 2019 – Mar 2020 · Nov 2020 – Nov 2021
ATP Ingeniería SAS | Colombia

- Resident engineer on cathodic protection and pipeline inspection projects for GeoPark, PetroSud and Parex.
- Ensured compliance with customer HSE requirements; prepared daily reports, tracked project expenditure against budget and closed out service tickets and final reports.

Quality Coordinator Jul 2020 – Nov 2020
Tubular Running and Rental Services (TRRS) | Colombia

- Ensured traceability of raw materials, fabrication procedures and passed non-destructive tests.
- Supervised phosphating and tension tests for TRRS China casing drive systems.

EDUCATION

Master of Science — Predictive Analytics (Finance & Investment) Feb 2025 – Nov 2026
Curtin University | Perth, Western Australia

- Coursework in econometrics, machine learning, financial modelling, data governance and quantitative risk.
- Curtin Finance Society (Marketing Officer, 2026); member of Curtin Quant Society, Curtin Data Science Association and Energy Club WA.

Bachelor of Science — Petroleum Engineering Feb 2014 – Sep 2019
Universidad de América | Bogotá, Colombia

- Specialisation in reservoir characterisation, drilling engineering and subsurface data acquisition.

SKILLS

Quantitative methods: Time-series forecasting, VECM / Johansen cointegration, ARIMA, XGBoost, machine learning, discrete-choice models, hypothesis testing, out-of-sample validation and backtesting, quadratic-programming optimisation, VaR

Energy & markets: LNG, gas and crude oil markets (JKM, Henry Hub, NBP, Brent), LNG freight, energy demand forecasting, portfolio optimisation, upstream drilling operations

Programming & data: Python (pandas, NumPy, scikit-learn, statsmodels), R, SQL, Stata, VBA, Power BI, Excel, Git/GitHub, LSEG Workspace

Engineering software: OpenWells, COMPASS, INSITE, DecisionSpace, Borehole Image

Languages: English (professional proficiency), Spanish (native)

REFEREES

Available upon request.
